Dear NanoVM Customer:

Solace Nutrition has enjoyed listening to the numerous compliments we have had about NanoVM. Amongst these compliments customers have also expressed a preference for an odorless powder.

The odor of NanoVM was directly caused from a nutrient called choline. Solace Nutrition has reformulated NanoVM 1-3 years by removing choline from the supplement. With this small change, NanoVM no longer has a distinct odor.

As choline is an essential nutrient, it is important to make sure that adequate amounts are consumed through diet. Please consult your healthcare professional regarding adequate intakes from food.

The current Daily Recommended Intake (DRI) for children between the ages of 1-3 years is 200 mg per day.

Dietary Sources of Choline

Soybeans
Tofu
Egg yolk
Beef, chicken
Wheat germ
Fish
Brewers yeast.

Solace Nutrition appreciates all feedback. We hope you continue to include NanoVM in the diet of your child.

Sincerely,

Solace Nutrition
